

Internal Pneumatic Operated Condensate Drain

EZ-Drain

A fully automatic plug and play design, zero loss drain that requires no external power utility.

Translucent reservoir for visual assurance of operation.

Features

realures
Plug and play design
Fully Pneumatic
Vertical compact design
Non clogging
Translucent reservoir
Isolated trigger assembly
Full port ball valve
Versatile for many applications

Benefits

Benefits
Easy to install
No external power utility
Can be installed in a tight space
No strainers to clean
Easy-to-see condensate level "Quick check"
Ensures a positive action, preventing air loss
Provides rapid discharge and avoids pluggage by contaminants
Can be used for aftercoolers, receivers, dryers, filters, or drip legs

Model No. EZ

Specifications

Inlets: (2) 1/2" NPT

Outlet: 3/8" NPT

Power: No External Power Required

Pressure: 0 to 200 PSI

Operating Temperature: 33° to 180° F.

Weight: 8 lbs.

Discharge: 12 ounces per cycle

Materials

Reservoir: Composite

Heads: Aluminum

Valve: Bronze w/S.S. Ball and Stem

Float: Stainless Steel

Seal: Viton®*

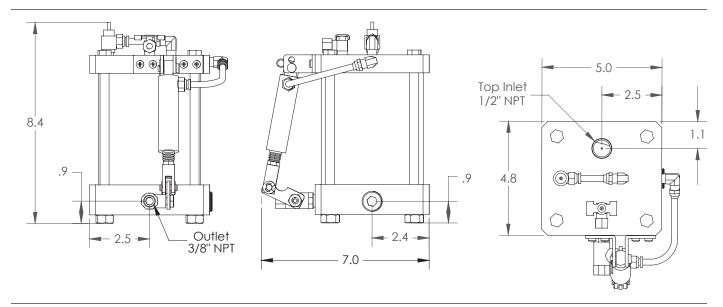

Consult factory for additional options

How It Works

Condensate enters the drain through one of two inlet connections. A stainless steel float is attached to a lever arm. Attached to the other side of the lever arm is a filter protected poppet assembly. As condensate is collected and the translucent reservoir fills, the stainless steel float mechanism rises. When the condensate reaches a design level, the float mechanism actuates the poppet assembly. The poppet assembly directs control air to the valve actuator, which in turn opens a full-port drain valve.

Condensation will then exit the unit. As the float drops and the poppet seal closes, the control air line and the valve accuator closes the ball valve. The drain is now ready to accept condensate again.
